Job Objective

Seeking assignments in SDLC, Tech Lead, and Application Development with an organization of high repute in the IT sector

Profile Summary

- An astute professional with nearly 20 years of rich experience in:

  Gathering Requirement & Analysis Software Development Project Management Implementation
  System Implementation Coordination

- Adept in executing projects involving scoping, debugging, design, architecture, sourcing, and interacting with the system engineering team for requirements gathering & analysis
- Adroit in delivering effective resolution to customer queries related to production support, interpreting customer usage patterns, and anticipating customer future requirements, hence ensuring a positive customer experience
- Problem solver with a passion for technology; skilled in grasping the big picture, conceptualising, developing, implementing solutions & partnering closely with business leaders & stakeholders
- Experience of end-to-end implementation of the SDLC, including finalization of specifications, design, development, implementation, and quality
- Impressive communicator with strong interpersonal, problem-solving, analytical, and decision-making skills.
- Knowledgeable in modern AI technologies, including Agent AI with Spring MCP (Model Context Protocol) and RAG (Retrieval-Augmented Generation).

IT Skills

- JAVA, J2EE, AWS Cloud, Cloud Foundry (Native cloud), OpenShift
- Spring Framework (Spring Boot, MVC, AI), Camel ESB, XML, UML, Open-Source Libraries
- JavaScript, Angular, ExtJS, HTML, DHTML, CSS, Active Server Pages, and VB Script
- SQL, PL/SQL, Oracle, MySQL, and MS-SQL Server, Toad, SQL Developer
- JBoss, Tomcat, Apache Web Server, Jetty, and IIS 4.0, Terracotta/EHCache
- JReport and Business Object (Report, Universe Design, SDK),
- IntelliJ Idea, eclipse, Net Beans, MS Project, JIRA
- SVN, Git, Bitbucket, Artifactory, Gradle, Ant, Maven
- Perforce, Jenkins, TeamCity, Black Duck, CheckMarx, SNOW

Organisational Experience

Since Nov'15 2023 with Axelon Services Corp, as VP Tech Lead

Project: Price Master Center Historical, Banking and Finance Securities Prices Domain, Citigroup Technologies (US)
Role: VP Tech Lead (15 Nov'23 to Date)

Business Problem: The PMC Historical Team is responsible for developing and maintaining mission-critical applications that deliver accurate and timely pricing data for securities, bonds, and equities to multiple downstream client platforms. As the Team Lead, I oversee the complete lifecycle of these pricing services—from requirement analysis to production deployment—ensuring reliability, performance, and compliance across the ecosystem.

My responsibilities span product planning, development oversight, quality assurance, release governance, and cross-functional coordination with enterprise teams to maintain operational excellence and platform stability.

Product & Requirement Management

- Engage with business analysts and client stakeholders to gather requirements and design end-to-end business flows.
- Prepare and maintain the product backlog, identify new requirements, and prioritize user stories.
- Lead sprint planning, backlog grooming, and estimation to ensure development readiness.

Development & Quality Oversight

- Monitor and control development progress across multi-location teams.
- Conduct code reviews, enforce coding standards, and ensure adherence to architectural and security guidelines.
- Oversee QA activities, validate test coverage, and ensure high-quality, defect-free releases.

Release & Deployment Management

- Lead monthly release cycles (once or twice per month), including code merging, release preparation, and production deployment.
- Coordinate with Production Support for deployments, OCC activities, PROD-to-COB switching, and post-deployment validation.
- Ensure smooth rollout of pricing services with minimal downtime.

Cross-Functional Collaboration and Multiple Team Engagement (4 Teams 10-12 engineers each)

- Partner with the DevOps team to resolve CI/CD issues and support pipeline migrations.
- Work with the Engineering Excellence team to remediate vulnerabilities and maintain compliance with enterprise security standards.
- Ensure best practices are consistently applied across Bitbucket, GitHub, and CI/CD pipelines for All Teams.
- Presented and proposed new tools and frameworks with POC implementations during Engineering Excellence All-Hands meetings, driving innovation and adoption across teams.

Environment: JAVA, Spring Boot (RESTful API), Maven, MongoDB, OpenShift, Docker, Kubernetes, Sonar, Jira, JFrog Artifactory, Bitbucket, TeamCity, GitHub, Lightspeed, Tekton, Harness, Blackduck, CheckMarx, Confluence

Since Jan'14 2014 with Virtusa Corporation USA, as System Engineering Manager

Project: JPMC CBD Digital Consolidation, Banking and Finance Payments Domain, JPM Chase (US)
Role: Senior Architect (15 Jul'23 to 15th Nov 2023)

Business Problem: End-user application and backend services development to transfer fund from one account to another internal or external account. End user applications for fund transfers are about to transform in AWS cloud components. Currently team is evaluating the business flows that are developed in Spring boot based microservices can be ported to AWS components. Also, we are evaluating or identifying the components requires to transform the business flow.

Environment: JAVA, AWS Cloud (Lambda Functions, Dynamo DB, RDS, SQS, S3), terraform, Kafka, Spring Framework, IntelliJ Idea, Sonar, Jira,

***On-The Job-Accomplishments*:**

- Contract Driven Testing with Pact Framework POC and code implementation

Project: JPMC IB-MS-Helix, Banking and Finance Disputes Domain, JPM Chase (US)
Role: Senior Consultant (15 Nov'21 to 15 May'23)

Business Problem: Disputes functionality is implemented to handle the Credit Card Transaction disputed by Card holder and to pay back the Card holder for Netflix transactions. This project is for technology transformation from Native cloud to AWS cloud. Native cloud applications were developed using Spring boot microservices Kafka, and deployed in CloudFoundry Native cloud. Native cloud services are rewriting in AWS Lambda functions, SQS, DynamoDB, and MySQL RDS, and some lambdas are configured with API gateway to process request and response from Native Services. Also, data replicated using EKS cluster based Microservice to fetch data from Kafka and processing data using various Lambda functions. End point certificates and Keys are used managed by ACM and KMS. AWS Components are configured and code deployed by terraform in CI/CD pipeline.

Environment: JAVA, AWS Cloud (Lambda Functions, Dynamo DB, RDS, SQS, S3, KMS, ACM), Terraform, Kafka, Spring Framework, IntelliJ Idea, Sonar, Jira,

***On-The Job-Accomplishments*:**

- User Story Creation for technical and code changes
- Attending Daily SCRUM meeting and Retrospective meeting to report issues.
- Three Amigo meeting for Use Story Validation, Prioritization
- AWS Serverless Component (Lambda Function) Development
- AWS Component creation in AWS Console
- Supporting DevOps Team to manage and change code in Jenkins pipeline
- Snow CR creation and coordination for production deployment of old existing Dispute application deployed in Cloud Foundry private cloud.

Project: AML Citi SAR GFTS, Banking and Finance AML Domain, Citi Bank N. A. (US)
Role: Senior Consultant (15 Feb'21 to 14 Nov'21)

Business Problem: Disputes functionality is implemented to handle the Credit Card Transaction disputed by Card holder and to pay back the Card holder for Netflix transactions.

Environment: JAVA, Kafka, Spring Boot, IntelliJ Idea, Sonar, Jira,

***On-The Job-Accomplishments*:**

- Check Image Transaction reporting functionality Coding
- Conducted UI development and Database changes
- Enhancement requirement analysis
- Archer VA Report Issue Analysis and remediation
- Sprint Iteration Management, Daily Scrum

Project: Procure to Pay, Banking and Finance, Citi Bank N. A. (US)
Role: Senior Consultant (01 Sep'20 to 14 Feb'21)

Business Problem: Internal Ticket processing system Project development tracking and System automation and provisioning.

Environment: Archer (VA Issue Tracker), Black Duck, Angular 5, Spring Boot (Micro Services), JPA, Oracle, Eclipse (IDE)

***On-The Job-Accomplishments*:**

- Archer VA Report Issue Analysis for Different applications and IT infrastructure
- Certificate updates and Software upgrade to recommended Version free from Vulnerability. JAVA, Firmware upgrade of HP Server Monitoring tool etc.
- Datacentre Server provisioning like: NAS configuration for directory mounting to Server hosts. LUN masking/Mapping.

Project: NextGen Global Transact, Banking and Finance Private Banking Domain, Citi Bank N. A. (US)
Role: Project Manager (14 Aug'18 to 31 Aug'20)

Business Problem: Citi Bank Personal Banking Front end and UI development for Money Transaction, different regions, and Past transaction search.

Environment: JAVA, Kafka, Spring Boot, Couchbase, IntelliJ Idea, Sonar, Jira, TeamCity, Black Duck, CheckMarx.

***On-The Job-Accomplishments*:**

- Participating in requirement discussion for understanding and finalizing requirements.
- Preparation of tasks/Stories list, UI mock-ups and time estimation
- Controlling and Monitoring of Project like Code Quality, Requirement completion and Standards followed by developers.
- POCs to validate the correct usage of frameworks.
- Coordination with Cyber Security and Development Team to fix Security issues and Scheduling.

Project: AML Name Screening, Banking and Finance AML Domain, Citi Bank N. A. (US)
Role: Architect (01 Dec'16 to 15 Aug'18)

Business Problem: AML Screening is an application for a fraud prevention system to filter out and stop money transactions initiated by black listed individuals or Organizations.

Environment: ExtJs, Spring Boot, Spring Framework, JPA, Oracle, Eclipse (IDE), Maven, Jenkins

***On-The Job-Accomplishments*:**

- Participating in requirement discussion for understanding and finalizing requirements.
- Preparation of tasks/Stories list, UI mock-ups and time estimation
- UI development with ExtJS, CSS
- Microservices development with Spring boot, JPA.
- Unit and integration testing code for UI and Web services.
- Jenkins pipeline preparation for CI/CD

Project: Department Management System, Health Domain, Cardinal Health (US)
Role: Architect (Apr'16 – Sep'16)

Business Problem: Department Management System (DMS) is Native cloud-based application to manage delivery to Hospitals Nuclear Pharmacy. It helps hospitals to Schedule Patients Doses, Track Nuclear Medicine Order, Tracking shipment, Inventory Management, Dose time Entry, medicine Radio activity decay calculation and Medicine container tracking and radio activity calculation before dispose or reuse.

Environment: Spring Boot, JPA, Hibernate, Liquibase, Spock, AngularJS, Bootstrap, HTML 5 with Responsive UI for Tablets and Desktops, Karma, Jasmine, Protractor, Gradle, Grunt, oracle (AWS RDS), Cloud Foundry, Eclipse (IDE), Git

***On-The Job-Accomplishments*:**

- Participated in Product and Release Backlog planning workshops for requirement discussions.
- Participated in Sprint planning and grooming sessions: Splitting epics into user stories, User story prioritization, Giving points to user stories
- UI coding with HTML, CSS, Bootstrap, AngularJS
- Restful Web service coding with Spring Framework and groovy
- Unit and integration testing code for UI and Web services.

Project: QNX/CNX Loaders, GE Transport (IN)
Role: Architect (Aug'2015 – Dec'2015)

Business Problem: Locomotive GPS data Processing.

Environment: Apache Camel, Fuse ESB, JBoss Developer Studio, Spring, Blueprint, Core Java, Active MQ, IBM Messaging, Karaf, Oracle 11, SVN, Maven

***On-The Job-Accomplishments*:**

- Meetings with clients to understand technical requirements.
- Requirement Documentation
- Design of ESB Layer and application

Project: Credit Card Processing, Finance and Insurance Domain, HomeServe (UK)
Role: Architect (Jan'01 – Aug,2015)

Business Problem: Integration of services and third-party Service over internet and understanding of third-party Service gateways design and functionalities. Design and implemented Data Pipeline for Insurance processing application.

Environment: JAVA, Camel ESB with Talend Enterprise Data Pipeline tool, SVN

***On-The Job-Accomplishments*:**

- Design of ESB Layer with Talend ESB Suite, as Designated Integration Architect.
- Helping Developers to complete the coding by assisting them in coding.
- Customer interfacing for technical requirement gathering, Risk Identification Registration, documentation HLD and LLD and getting approval for design and documentation.
- Integrated DataCash Payment Gateway. For this task, I have acted as Functional + Technical Architect.
- Single point of contact with DataCash Support team for Payment Gateway issues.
- Participated in Talend software upgrade to higher version for ESB implementation qualification.

Project: OpenText
Role: Architect (sep'15 – Oct'15)

Business Case: UI Designing with AngularJS.

Environment: AngularJS, JavaScript, JQuery

***On-The Job-Accomplishments*:**

- Implementation of design with AngularJS.
- Helping developers in day-to-day development.
- Instructor Led Taring to team member on JavaScript and AngularJS

Project: SAP RDS
Role: Architect (Apr'01 – Jul'30)

Business Case: Rapid deployment of SAP FSCD module with AgularJS based client interface over interment for accessing insurance policies and other customer details using Phone, Tablet, and desktop.

Environment: AngularJS, JavaScript, JQuery, CSS, HTML5, Ajax

On-The Job-Accomplishments:

- UI Design with AngularJS.
- Helping developers in day-to-day development.

Practice capability building with jBPM and Drools
(Environment: jBPM, Eclipse IDE, Spring Frame work, Gradle, SVN, Apache, Tomcat)

Being a part of Java CoE team preparing Demo Application and setup to show the company's capability to customers in Business Process Modeling with open-source tools and technology like jBPM. Currently working with one of the customers in finance business and gathering technical requirement of.

Since Jan'12 – Sep'13 with Ivy Comptech Pvt. Ltd., Hyderabad as Assistant Project Manager

(Environment: Terracotta EHCache, Eclipse IDE, Spring Frame work, Gradle, SVN, TeamCity, Artifactory, JIRA, Apache, Tomcat, Jetty, Oracle 10g, Visual VM, JConsole, Byteman)

Role:
Individual Contribution

- Being a part of Technology Management Team did the feasibility and PoC for:
    - Caching API adapter framework to use different Caching APIs/software like Terracotta, memcache, ncache, DirectCache uniformly without changing client code.

- Proposed Hadoop Big data for various use cases and Distributed caching with Bigdata was one. Prepared setup to use and undusted functioning of upcoming Terracotta with Big data. Presented BI Reporting with Hadoop and Hive to BI Team.
- Compare and evaluated various Caching software feature wise and usage difficulties.

- Designed an Enterprise Service Bus (ESB) based application for routing messages from Oracle AMQ to various respective services running on local or remote data center asynchronously
- Looked after:
  - Lean Dev-Ops Continuous integration and deployment system gap analysis compare to existing CI Tool. Framework and Tools evaluation Byteman, Direct Memory, Zookeeper etc.

Team Lead (first 10 months)

- Functioned as a Project Leader of Distributed Computing and Caching Team Lead for:
  - Gathering requirements of caching, estimation of cache memory required organization wide for purchasing terracotta license
  - Working with Terracotta Vendor Team for finding the root cause of issues in Terracotta product using webEx in production and stress (simulating/reproducing) set-ups
  - Evaluating other caching and memory accessing technology-based products compare to Terracotta,
- Serving as a Scrum Master and leading a team of 6 for one of the produced developments in projectized structure

Highlight:

- Designed ESB application, improved the performance by 50% and reduced the application failure from once in a week to no failure (downtime) in production

Mar'05-Jan'12 with Hewlett-Packard ISO Pvt. Ltd., Hyderabad as Technical Person III

(Environment:JAVA, JSP, EJB, SQL, XML, JReport, SAP Business Object, Oracle 9i/10g, JBoss, IntelliJ Idea, Servers (HP, SUN), Switches (Brocade, CISCO), Arrays (EMC, EVA, HDS, NetApp), NAS, SVN and Perforce. InstallAnywhere)

Role: Subject Matter Expert

- Design, development, and documentation for reporting middle tier EJB component for running and downloading report at client end using Command Line Interface
- Development of InstallAnywhere script and batch and shell scripts for installer development and deployment tool.
- Involved in fixing defects of CLI, Reports, Reports UI, Report EJB components and SAN Change Management Tool

Highlight:

- Steered initiatives for giving excellent performance and based on performance a& prompt development
  - Project was given to Hyderabad Team for development and team was recognized as Best Performing Team

Previous Experience

Aug'01 – Jul'02 with Navionics Technologies Pvt. Ltd., Hyderabad as Senior Software Engineer

Oct'00-Jul'01 with Cybermotion (India) Pvt. Ltd., Hyderabad as Software Engineer

Feb'00-Sep'00 with Anion Technologies Pvt. Ltd., Hyderabad as Web Application Developer

Education

- BE (Civil Engineering) from Bhilai Institute of Technology, Durg, Pt. Ravishankar Shukla University, Raipur with 60%: 1998

Certifications:

- AWS Certified Cloud Practitioner – valid from 16 Mar'23 to 15 Mar'26
- Oracle Certified Associate Java 8 - valid from 2019
- Certified Scrum Master (Agency: ScrumAlliance) - valid from Dec'2012 to Dec'2014
- SAP Business Object Certified Reports Designer (SAP BusinessObjects Training Division, Chennai)

Personal Details

Date of Birth	26th September 1974
Residential Address	1321 Ocean Reef Road, Wesley Chapel, Florida, USA, Zip 33544
Languages Known	Hindi and English
